Serial No. 09/042,666

Art Unit 2874

Applicant's communications filed on March 5, 2002, supplementally on March 8, 2002, and further supplementally on May 1, 2002, have all been carefully studied by the Examiner. The arguments advanced therein, considered together with the amendments made to the claims, are persuasive and the rejections set forth in the previous Office action are withdrawn. The arguments, explanations, and 37 CFR § 1.132 Declaration of Martin M. Fejer, sufficiently convince the Examiner that none of the references relied on in the previous Office action disclose or suggest *optical parametric generation (OPG)* in a nonlinear optical waveguide. The claimed subject matter would thus *not* have been obvious, at the time of applicant's invention, to a person of ordinary skill in the art. In view of further search, however, and the consequent discovery of relevant prior art documents, a new rejection is set forth below. This action is *not* made final.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR § 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application.

See 37 CFR § 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR § 3.73(b).

Claims 1, 5-13, 29-33, and 36 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8, 23, and 24 of U.S. Patent No. 6,154,310. Although the conflicting claims are not identical, they are not patentably distinct from each other because the patent claims recite an optical wavelength conversion apparatus for ultrashort optical pulses comprising a plurality of the same wavelength conversion channels (each including an optical waveguide with an optical parametric generation portion) of which only one is being claimed herein. Clearly, since the patent claims include a plurality of such channels, a person of ordinary skill in the art would have found a single such channel to have been obvious. The recitation in present claim 36 is a characteristic of the waveguide OPG device and would obviously have been present in the patented device. As for the recitations in present claims 29 and 30, the person of ordinary skill in the art would have recognized that these limitations are encompassed by the patent claims (as discussed in the patent beginning in column 5, line 24).

Claims 2-4, 34, and 35 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The claims of U.S. Patent No. 6,154,310 do not cover an ultrashort pulse generator which includes a mode converter for coupling input light into the optical waveguide. Note that if a proper terminal disclaimer is timely filed in order to overcome the above double patenting rejection, claims 2-4, 34, and 35 would be allowable without change.

Serial No. 09/042,666  
Art Unit 2874

Claims 14-28 are allowed. The claims of U.S. Patent No. 6,154,310 do not cover color image generating devices as specified in these claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 5,574,818 to Krivoshlykov shows an optical nonlinear waveguide wherein optical parametric oscillation OPO (not optical parametric generation OPG) takes place.
